Skills

Programming

Languages

Python, Java, SQL, C++, R

AI

Ollama, RAG

Machine Learning

Scikit-learn, PyTorch, TensorFlow, NumPyro, JAX

Data Science

Pandas, Jupyter Notebook, Plotly, Scipy, Matplotlib, Seaborn

Frontend

HTML, CSS, Thymeleaf, Bootstrap, Angular, JavaScript, TypeScript

Backend

Django, FastAPI, Spring Boot, Firebase

Databases

SQLite, Microsoft SQL Server

Development Tools

Git, Docker, Bash

Third-year Computer Science student at FCSE, focusing on Artificial Intelligence, Machine Learning and research in the respected fields. Committed to community-driven knowledge sharing and leadership, with hands-on experience in team coordination and technical event organization. Always looking to connect with people to innovate and create a better world through technology and community work.

Education

Faculty of Computer Science and Engineering (FCSE)

October 2023 - present

Bachelor of Science in Computer Science, focusing on research and development in Machine Learning, AI, and subsequent fields

High School Gimnazija "Slavco Stojmenski"

September 2019 - June 2023

Natural Science and Math - A

Experience

EESTEC

Remote

Member of the IT Team

February 2024 - March 2024

Responsible for creating, editing, and maintaining the EESTEC.net Web Page, which serves over 5000 members

Technologies: Python, TypeScript, Next.js

Projects

Doc-Cleaner - PDF to .md converter

May 2026 - present

Developed a local-first, automated document ingestion pipeline in Python that converts unstructured PDFs and DOCX files into clean, LLM-ready Markdown for RAG workflows. Uses IBM Docling for layout-aware extraction and a local Ollama LLM for text refinement and structured metadata generation.

Technologies: Python, Ollama, IBM Docling, Watchdog, FastAPI, Docker

Model Translation Web Platform

January 2026 - present

As a team, my colleagues and I have built a web-based translation platform that supports multiple translation providers, per-document versioning, bulk translation and reviewer workflows. My contribution was implementing the services that serve the whole application and designing the DTOs for model communication.

Technologies: Java, Spring Boot, Thymeleaf, REST, Docker, Google Translate API

Bayesian Linear Regression with MCMC method

June 2025 - October 2025

This is a project that implements Markov Chain Monte Carlo Regression, specifically Bayesian Linear Regression for Parkinson Telemonitoring, with NumPyro + NUTS for predictions from voice features

Technologies: NUTS, JAX, MCMC, Python, Pandas, Scikit-learn, NumPy

MoodLens - Emotion Recognition in Images and Video

May 2025 - September 2025

Developed a CNN-based Emotion Recognition system, fine-tuning ResNet for recognising emotions in images and real-time video analysis with 68% accuracy

Technologies: PyTorch, OpenCV, NumPy, Pandas, Python

PyCheckers - Checkers adversarial AI bot

June 2025 - September 2025

My implementation of the game of Checkers. Using Minimax and Expectimax algorithms, the main features are heuristic evaluation, depth analysis, and visual implementation.

Technologies: PyGame, Pandas, Python

Comparison of MI-based and Classical Feature Selection Methods in ML processes

25th April 2026

Conference on Informatics and Information Technologies (CIIT)

In this research, we tackled the challenges of high-dimensional data by evaluating how Mutual Information-based selectors stack up against traditional feature selection techniques.

Volunteer

EESTEC LC Skopje

10.2023 - 12.2025

Skopje

Workshop Speaker | Back to Basics

- Mentored 40+ students in Structural Programming, providing personalized guidance and troubleshooting for midterm and final exam preparation.
- Designed and curated targeted exercise sets to reinforce complex coursework, directly contributing to the successful exam pass rate of over 40 students.

Head of Logistics | EESTEC Academy Robotics

- Led logistical operations for the EESTEC Academy Robotics event, ensuring the seamless coordination of resources for over 50 participants.
- Streamlined material transport and onsite workflows, facilitating the efficient execution of all planned workshop activities.

AI Tech Summit 2025

Skopje

- Provided logistical support and managing resources, ensuring a seamless experience for attendees.
- Maintained professional standards within the venue by overseeing post-session venue site management to ensure a nice, clean and sustainable event,
- Engaged in professional development by attending technical sessions and gaining industry insights directly from key speakers and subject matter experts.
