Skills

Programming Languages
Python, Java, C++, SQL

Machine Learning
PyTorch, TensorFlow, NumPyro, Scikit-learn

NLP
Ollama, Hugginface Transformers

Data Science
Pandas, Jupyter Notebook, Matplotlib, Seaborn

Frontend
HTML, CSS, Thymeleaf, Bootstrap, Angular, JavaScript, TypeScript

Backend
Django, FastAPI, Spring Boot, Firebase

Databases
SQLite, PostgreSQL, Microsoft SQL Server

Development Tools
Git, Docker, Bash

Summary

Fourth-year Computer Science student at FCSE, focusing on Artificial Intelligence, Machine Learning, and research in these fields. Committed to community-driven knowledge sharing and leadership, with hands-on experience in team coordination and technical event organization. Always looking to connect with people to innovate and create a better world through technology and community work.

Education

Faculty of Computer Science and Engineering (FCSE) October 2023 – Present

Bachelor of Science in Computer Science, focusing on research and development in Machine Learning, AI, and subsequent fields

Experience

EESTEC Remote

IT Team Member February 2025 – March 2025

Responsible for creating, editing, and maintaining the EESTEC.net Web Page, which serves over 5000 members

Technologies: Python, TypeScript, Next.js

Macedonian Academy of Sciences & Arts October 2026 – Present

Machine Learning Researcher Intern

Contributing to an ongoing research project benchmarking 3D vision-language models for medical imaging. The work evaluates models such on structured diagnosis of brain MRI across healthy, metastatic tumor, and multiple sclerosis cohorts.

Projects

Doc-Cleaner - PDF to .md converter May 2026 – Present

Developed a document ingestion pipeline in Python that converts unstructured PDFs and DOCX files into clean, LLM-ready Markdown for RAG workflows. Uses IBM Docling for document ingestion and cleaning and a local Ollama LLM for text refinement and structured metadata generation.

Technologies: Python, Ollama, IBM Docling, Watchdog, FastAPI, Docker

Doctor Studies Platform April 2026 – Present

Full-stack doctoral admissions platform featuring user roles, language support, schema-enforcing admission rules - deadlines, mentor capacity, valid transitions - a guarded application status machine with per-role authorization and configurable eligibility criteria (ECTS, GPA, English).

Technologies: Java, Spring Boot, Thymeleaf, PostgreSQL, Maven, Docker

MafiaLab: LLM Agents in Social Deduction Games August 2026 – Present

An independent, open-source reimplementation of the Mini-Mafia benchmark from the paper *Deceive, Detect, and Disclose*. It measures how well large language models deceive, spot lies, and share information when they play against each other.

Technologies: Python, Ollama, Pydantic

Certifications

Early Sepsis Warning: Interpretable Survival Modeling June 2026 – Present

Team project on early sepsis prediction from hourly ICU data (PhysioNet/CinC 2019). Built an ETL pipeline and PostgreSQL warehouse (Python/Polars, dbt, TimescaleDB) that produces a leakage-safe feature mart with 262 past-only features and patient-level splits. Now developing an interpretable discrete-time hazard model, evaluated on the challenge's clinical utility score, calibration, and alarm timing.

Model Translation Web Platform January 2026 – June 2026

As a team, my colleagues and I have built a web-based translation platform that supports multiple translation providers, per-document versioning, bulk translation and reviewer workflows. My contribution was implementing the services that serve the whole application and designing the DTOs for model communication.

Technologies: Java, Spring Boot, Thymeleaf, REST, Docker, Google Translate API

Publications

Analysis of Spiking Neural Networks on Formal Languages September 2026

Association for Information and Communication Technologies (ICT-ACT)

Studies whether feedforward Spiking Neural Networks can recognize formal languages, benchmarked against GRU and LSTM baselines and a recurrent spiking control, with all models matched to the same parameter budget.

Comparison of MI-based and Classical Feature Selection Methods in ML processes

April 2026

Conference on Informatics and Information Technologies (CIIT)

In this research, we tackled the challenges of high-dimensional data by evaluating how Mutual Information-based selectors stack up against traditional feature selection techniques.

Volunteer

EESTEC LC Skopje October 2023 – Present

Skopje

Workshop Speaker and Head of Logistics at Back to Basics

- Mentored 40+ students in Structural Programming, providing personalized guidance, curated and targeted exercise sets to reinforce complex coursewo,rk and troubleshooting for midterm and final exam preparation.

AI Tech Summit

Skopje

- Provided logistical and resource support and attended technical sessions to gain industry insights from key speakers and subject matter experts.
- Established and administered the summit's GitHub organization, setting up repository structure, access permissions, and contribution guidelines for the participants of the AI Student Hackathon.
- Helped combine the summit's attendee-facing web tools, including a live event agenda and a RAG-based assistant that answered questions from the event details

What The Stack

Skopje

- Managed the on-site registration desk, processing participant check-ins and badge distribution
- Served as a general point of contact for attendees and organizers throughout the event, resolving questions and handling issues as they came up across sessions.
- Set the tone on the floor as an energetic, approachable presence — welcoming participants, keeping engagement high between sessions, and contributing to the event's overall atmosphere.
